

# Startup Game

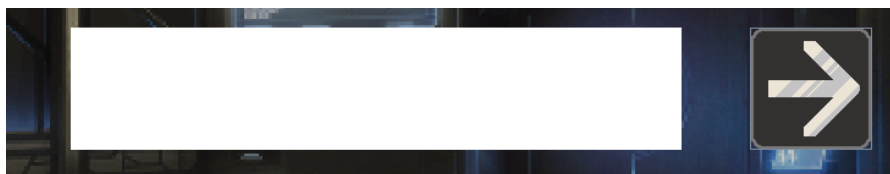

To start a game of Hovertanks, there must be a server. In your group, one person can act as the host for all the other players (max of four).

## If You Press “Server”

The host should be brought to this screen, which will display the IP Address that the other three players can connect to.

## If You Press “Client”

The client(s) should be brought to this screen, which will display a text area. This is where you will be able to type the IP Address that the server was given.
